

# It's Og Kush versus Sour Diesel:

## OG Kush - A Brief Description:

First cultivated in Florida almost 30 years ago, OG Kush is also known as "**Premium OG Kush**" or just "Kush." While the exact genetic lineage is unknown, Chemdawg, Hindu Kush, and Lemon Thai are believed to have been mixed with an unknown Northern Californian strain to create OG Kush. It is likely that the secrecy is due to the strain's tremendous fame - [OG Kush](#) is one of the most recognizable and widely used strains of medical marijuana. The strain's nearly balanced composition (**55% Sativa, 45% Indica**) and mid-high THC levels make it popular worldwide.

It is the strain that gave rise to the word "OG," which has been used in a number of other cannabis strains over time. It has been said that "OG" pays homage to "**Original Gangster**," an even older strain, but other stories have been told as well. Despite its hardness and resininess, it grows in chunky buds shaped like grapes and characterised by dark green leaves. Overlong, thin, and orange pistils characterise its flowers. White gold-like trichomes covered in resin that sparkle and shine like white gold. Within eight to nine weeks, **OG Kush** flowers, producing 17 ounces of weed per square metre. In addition to growing well indoors, the strain also thrives outdoors.

## OG Sour Diesel - A Brief Description:

OG Sour Diesel is a marginally Sativa-inclining mixture with a puzzling past. Nobody realises without a crossed this superbly strong half breed, doubt, however we're grateful they got it done. A few sources guarantee The Cali Connection, a California based pot organisation, is behind the strain's commencement. In the event that The Cali Connection is its actual originator, the strain is a result of crossing Sour OG and East Coast Sour Diesel. Different sources guarantee that [OG Sour Diesel](#) is a combination of Sour OG and either Chemdawg, Super Skunk, or OG Kush.

Notwithstanding this secret, OG Sour Diesel is a one of a kind and strong daytime mixture that makes certain to give you a much needed boost.

Most OG Sour Diesel buds resemble the other the same, however there are a couple of aggregates that current themselves uniquely in contrast to each other. The most prevailing aggregate presents as overgrown, olive green piece buds that are formed generally like hearts or spades. These buds have various flimsy orange hairs that fold and wind themselves over the outer layer of the bloom, adding a touch of much-required profundity and variety. The blossom is canvassed in a light tidying of completely clear trichomes, that make certain to make your fingers tacky whenever separated the hard way. As the name recommends, its fragrance is very stinky, and you ought to hope to smell fundamentally diesel and skunk. The flavor is very comparative notwithstanding a touch of harsh spices on the trailing sensation.
